

ORGANIZATION, SELECTION, AND APPLICATION OF VIDEO EFFECTS ACCORDING TO ZONES

Abstract of the Disclosure

[0072] A storyboard of video clips is divided into zones, or segments. The

5 user selects a zone, and the invention presents a list of effects that are applicable
to the selected zone. The user can select among the presented effects in order to
apply the effect to the selected zone. Effects that are inapplicable to the selected
zone are hidden from view and not displayed. Thus, the overall number of ef-
fects that are presented at any given time is reduced, and the process of selecting
10 an appropriate effect is simplified and made easier for novice users.
